

JUNYAO (JORDAN) MA

Madison, WI | 608-707-9365 | jordan.analyst.wisc@gmail.com

SUMMARY

Statistics undergraduate with completed internships in credit-risk analytics, quantitative research, and banking operations. Applied Python, Snowflake SQL, and R to cohort analysis, underwriting calibration, factor engineering, correlation analysis, and backtesting.

EDUCATION

University of Wisconsin-Madison - B.S. Statistics

Expected May 2027

Probability, Linear Algebra, Regression, Time Series, Statistical Computing, Data Visualization, Machine Learning

TECHNICAL SKILLS

Python (pandas, NumPy); Snowflake SQL; R (tidyverse, ggplot2, Shiny); regression; time series; cohort and vintage analysis; factor engineering; z-score standardization; correlation/IC analysis; data cleaning; joins; simple backtesting.

EXPERIENCE

EasySaleCloud Jun 2026 - Aug 2026

Applied AI in Data Intern | Rockville, MD

- Built credit-risk analytics for an internal Credit Card Portfolio BI Agent using 24 months of card-lifecycle data, quantifying underwriting-model calibration, adverse selection, and vintage loss-curve deterioration.
- Constructed vintage cohort loss curves and score-band checks in Python, comparing predicted versus realized default and loss rates across origination vintages.
- Measured channel and credit-line adverse selection by comparing cohort risk and profitability patterns and identifying segments requiring closer underwriting review.
- Wrote and validated Snowflake SQL for core risk queries, cross-checking agent-generated figures against hand-verified Python baselines and documenting statistical caveats.

Chuangjin Hexin Fund Management Co., Ltd. Jun 2026 - Aug 2026

Intern, Quantitative Data Department | Shenzhen, China

- Extracted and constructed A-share trading-volume, price, and adjusted-volume factors from daily market data.
- Standardized cross-sectional factor values and compared relationships with 5-day and 20-day excess returns using correlation-based information coefficients.
- Ranked securities by signal values and performed simple long-short portfolio backtests to evaluate predictive strength and robustness.
- Documented an end-to-end research workflow covering factor construction, standardization, correlation testing, factor selection, and backtesting limitations.

Industrial and Commercial Bank of China, New York Branch May 2025 - Jul 2025

Credit Card Operations Analyst Intern | New York, NY

- Analyzed and reconciled 2,000+ credit-card applications across source documents and internal systems, turning recurring exceptions into structured validation rules and QA checks.
- Screened applicant records against internal FICO thresholds and documented exceptions, contributing to a reported 15% improvement in early-stage risk flagging.
- Applied KYC/AML and internal audit controls while supporting transaction monitoring and escalation, with zero compliance findings reported during the internship.

SELECTED PROJECTS

Global CO2 Emissions & Energy Dashboard 2026

R, Shiny, ggplot2, tidyverse

- Built a reactive R Shiny module for 50,411 observations with user-controlled metrics, filters, trends, and correlations.
