

JUNYAO (JORDAN) MA

Madison, WI | 608-707-9365 | jordan.analyst.wisc@gmail.com

SUMMARY

Statistics undergraduate with completed internships spanning applied AI, credit-card operations, and energy data. Experienced in translating stakeholder questions into governed metrics, validating high-volume records, and improving recurring workflows with SQL, Snowflake, Power BI, Excel, Python, and R.

EDUCATION

University of Wisconsin-Madison - B.S. Statistics

Expected May 2027

Probability, Linear Algebra, Regression, Time Series, Statistical Computing, Data Visualization, Machine Learning

TECHNICAL SKILLS

SQL; Snowflake; Power BI; Advanced Excel (PivotTables, formulas, lookups, conditional formatting, Data Validation); Python (pandas, NumPy); R; KPI definition; requirements translation; data-quality auditing; reconciliation; process improvement.

EXPERIENCE

EasySaleCloud Jun 2026 - Aug 2026

Applied AI in Data Intern | Rockville, MD

- Built the analytics layer of an internal Credit Card Portfolio BI Agent for a consumer issuer, converting recurring portfolio and underwriting questions into governed metrics across a 16-table Snowflake warehouse.
- Wrote and validated cross-portfolio SQL for underwriting calibration, adverse selection, and vintage loss curves; cross-checked results in Python against hand-verified baselines.
- Translated recurring questions from risk, finance, and marketing stakeholders into version-controlled KPI definitions, dashboard requirements, and plain-English answer formats.
- Delivered self-service Power BI and agent outputs with metric caveats and consistent portfolio and vintage views, reducing reliance on one-off analyst requests.

Industrial and Commercial Bank of China, New York Branch

May 2025 - Jul 2025

Credit Card Operations Analyst Intern | New York, NY

- Reconciled 2,000+ applications across source documents and internal systems using field-level control points; defect categories exposed recurring missing or mismatched fields while sustaining 100% processing accuracy.
- Designed a 1,000+ account exception tracker with formula-driven return-lag and overdue flags; conditional formatting converted billing-cycle risk into a prioritized work queue for operations and loan teams.
- Analyzed cycle status, overdue volume, and return-date performance in PivotTables to isolate repeat bottlenecks; standardized follow-up rules supported a measured 10% faster issuance turnaround.
- Operationalized FICO thresholds into review categories and compared pre/post flag distributions in Excel, improving early-stage risk identification by 15% while preserving KYC/AML controls.

Qulian Technology

May 2024 - Jul 2024

Data Operations Analyst Intern, Energy Data Focus | Hangzhou, China

- Defined a common record grain - partner, energy type, date, and consumption - to reconcile system exports from five companies across 100,000+ monthly records.
- Converted completeness, duplicate-key, format, outlier, and cross-month checks into a rule-based Excel control framework using formulas, Data Validation, filters, and conditional formatting.
- Segmented exceptions by partner, date, and energy type and compared adjacent-month patterns to determine which variations required source-owner investigation rather than routine acceptance.
- Established a closed-loop workflow from issue logging and owner assignment through correction and revalidation; resolved discrepancies within 24-48 hours and reduced manual tracking errors by approximately 5%.

SELECTED PROJECTS

Global CO2 Emissions & Energy Dashboard 2026

R, Shiny, ggplot2, tidyverse

- Translated a broad emissions question into a 50,411-row comparison framework, defining country-year views across energy use, CO2, GDP, and population.
- Designed metric/year controls, fitted-trend and correlation summaries, and data-quality rules that excluded aggregate regions and separated missing values from true zeros.

CREDENTIALS & LEADERSHIP

SOA Exam P - Passed | Chinese National First-Level Golf Athlete | AMC 12 Top 15% and AIME Qualifier
