

JUNYAO (JORDAN) MA

Madison, WI | 608-707-9365 | jordan.analyst.wisc@gmail.com

SUMMARY

Statistics undergraduate with completed BI and data-operations internships across consumer credit, banking, and energy. Built governed metrics, validation workflows, and self-service reporting with Snowflake SQL, Power BI, Python, Excel, and R/Shiny.

EDUCATION

University of Wisconsin-Madison - B.S. Statistics

Expected May 2027

Probability, Linear Algebra, Regression, Time Series, Statistical Computing, Data Visualization, Machine Learning

TECHNICAL SKILLS

Snowflake SQL; Power BI; Advanced Excel (PivotTables, formulas, lookups, conditional formatting, Data Validation); Python (pandas, NumPy); R (tidyverse, ggplot2, Shiny); reconciliation; KPI governance; dashboard development; reporting automation.

EXPERIENCE

EasySaleCloud Jun 2026 - Aug 2026

Applied AI in Data Intern | Rockville, MD

- Built the analytics layer of a Credit Card Portfolio BI Agent over 16 Snowflake tables, standardizing recurring portfolio questions into governed metrics and reusable self-service reporting definitions.
- Wrote cross-portfolio Snowflake SQL for underwriting calibration, adverse selection, and vintage loss curves; validated outputs in Python against hand-verified baselines.
- Created version-controlled KPI definitions and caveat reminders so regulated credit metrics were interpreted consistently across reports and agent answers.
- Delivered Power BI dashboards and plain-English self-service outputs, giving risk, finance, and marketing teams consistent portfolio and vintage reporting.

Industrial and Commercial Bank of China, New York Branch

May 2025 - Jul 2025

Credit Card Operations Analyst Intern | New York, NY

- Built a repeatable Excel reconciliation layer for 2,000+ applications, using field-level filters and defect categories to surface missing or mismatched data and validate 100% processing accuracy.
- Structured a 1,000+ account control table with calculated return lag, overdue status, conditional formatting, and PivotTable outputs, converting raw records into a prioritized exception-reporting workflow.
- Used cycle-aging and FICO-threshold views to diagnose bottlenecks and risk-flagging gaps; control refinements supported 10% faster issuance and a 15% improvement in early-stage risk identification.

Qulian Technology

May 2024 - Jul 2024

Data Operations Analyst Intern, Energy Data Focus | Hangzhou, China

- Designed a standardized Excel review schema at partner-energy-date grain for 100,000+ monthly records from five partner exports, creating consistent inputs for recurring quality controls.
- Implemented rule-based controls for completeness, duplicate keys, format validity, outliers, and cross-month consistency using formulas, Data Validation, filters, and conditional formatting.
- Built partner-energy-date exception views to accelerate triage and trace likely source or entry issues before escalation.
- Maintained a closed-loop data-quality workflow through owner assignment, correction, revalidation, and verified system updates; resolved discrepancies within 24-48 hours and reduced manual tracking errors by approximately 5%.

SELECTED PROJECTS

Global CO2 Emissions & Energy Dashboard 2026

R, Shiny, ggplot2, tidyverse

- Developed a reusable R Shiny module for 50,411 observations, linking year/metric selectors to filtered data, dynamic labels, fitted trends, and correlation summaries.
- Hardened dashboard data quality by excluding aggregate OWID rows, separating missing values from true zeros, documenting 2023-2024 GDP gaps, and packaging the module for app.R integration.

CREDENTIALS & LEADERSHIP

SOA Exam P - Passed | Chinese National First-Level Golf Athlete | AMC 12 Top 15% and AIME Qualifier
