

JUNYAO (JORDAN) MA

Madison, WI | 608-707-9365 | jordan.analyst.wisc@gmail.com

SUMMARY

Statistics undergraduate with completed internships in credit-risk analytics, quantitative research, banking operations, and energy data quality. Applied Python, Snowflake SQL, and R to cohort analysis, underwriting calibration, factor engineering, correlation analysis, and backtesting.

EDUCATION

University of Wisconsin-Madison - B.S. Statistics

Expected May 2027

Probability, Linear Algebra, Regression, Time Series, Statistical Computing, Data Visualization, Machine Learning

TECHNICAL SKILLS

Python (pandas, NumPy); Snowflake SQL; R (tidyverse, ggplot2, Shiny); Advanced Excel (PivotTables, formulas, conditional formatting, Data Validation); regression; time series; cohort and vintage analysis; factor engineering; z-score standardization; correlation/IC analysis; data cleaning; joins; simple backtesting.

EXPERIENCE

EasySaleCloud Jun 2026 - Aug 2026

Applied AI in Data Intern | Rockville, MD

- Built credit-risk analytics for an internal Credit Card Portfolio BI Agent using 24 months of card-lifecycle data, quantifying underwriting-model calibration, adverse selection, and vintage loss-curve deterioration.
- Constructed vintage loss curves and score-band checks in Python, comparing predicted with realized default and loss rates across origination cohorts.
- Compared cohort risk and profitability by channel and credit line to identify segments requiring tighter underwriting review.
- Wrote and validated Snowflake SQL for core risk queries, cross-checking agent-generated figures against hand-verified Python baselines and documenting statistical caveats.

Chuangjin Hexin Fund Management Co., Ltd. Jun 2026 - Aug 2026

Intern, Quantitative Data Department | Shenzhen, China

- Extracted and constructed A-share trading-volume, price, and adjusted-volume factors from daily market data.
- Standardized cross-sectional factors and compared them with 5-day and 20-day excess returns using correlation-based information coefficients.
- Ranked securities by signal and ran simple long-short backtests to evaluate predictive strength and robustness.
- Documented factor construction, standardization, correlation testing, selection, and backtesting limitations.

Industrial and Commercial Bank of China, New York Branch May 2025 - Jul 2025

Credit Card Operations Analyst Intern | New York, NY

- Defined field-level validation labels for completeness, mismatch, and FICO exceptions across 2,000+ applications, turning manual reconciliation results into analyzable defect categories while sustaining 100% processing accuracy.
- Engineered return-lag, overdue, and FICO flags for 1,000+ accounts in Excel; PivotTable comparisons quantified 10% faster issuance and 15% improved early risk identification under KYC/AML controls.

Qulian Technology May 2024 - Jul 2024

Data Operations Analyst Intern, Energy Data Focus | Hangzhou, China

- Profiled 100,000+ monthly energy records across completeness, uniqueness, validity, and temporal-consistency dimensions; rule-based Excel checks isolated missing, duplicate, malformed, outlier, and cross-month exceptions.
- Investigated anomalies at partner-energy-date grain and revalidated corrected records before system updates; 24-48-hour closure and standardized tracking reduced manual errors by approximately 5%.

SELECTED PROJECTS

Global CO2 Emissions & Energy Dashboard 2026

R, Shiny, ggplot2, tidyverse

- Built a reactive country-level analysis over 50,411 observations spanning 1750-2024, updating bubble-scatter views, fitted trends, and correlations as inputs changed.
- Removed aggregate regions, separated missing values from true zeros, and documented incomplete GDP coverage to keep conclusions descriptive rather than causal.

CREDENTIALS & LEADERSHIP

SOA Exam P - Passed | Chinese National First-Level Golf Athlete | AMC 12 Top 15% and AIME Qualifier
