

JUNYAO (JORDAN) MA

Madison, WI | 608-707-9365 | jordan.analyst.wisc@gmail.com

SUMMARY

Statistics undergraduate with completed BI and data-operations internships across consumer credit, banking, and energy. Built governed metrics, validation workflows, and self-service reporting with Snowflake SQL, Power BI, Python, Excel, and R/Shiny.

EDUCATION

University of Wisconsin-Madison - B.S. Statistics

Expected May 2027

Probability, Linear Algebra, Regression, Time Series, Statistical Computing, Data Visualization, Machine Learning

TECHNICAL SKILLS

Snowflake SQL; Power BI; Advanced Excel (Power Query, PivotTables, lookups, validation, VBA/macros); Python (pandas, NumPy); R (tidyverse, ggplot2, Shiny); data cleaning; reconciliation; KPI governance; dashboard development; reporting workflows.

EXPERIENCE

EasySaleCloud Jun 2026 - Aug 2026

Applied AI in Data Intern | Rockville, MD

- Built the analytics layer of a Credit Card Portfolio BI Agent over 16 Snowflake tables, standardizing recurring portfolio questions into governed metrics and reusable self-service reporting definitions.
- Wrote cross-portfolio Snowflake SQL for underwriting calibration, adverse selection, and vintage loss curves; validated outputs in Python against hand-verified baselines.
- Created version-controlled KPI definitions and caveat reminders so regulated credit metrics were interpreted consistently across reports and agent answers.
- Delivered Power BI dashboards and plain-English self-service outputs, giving risk, finance, and marketing teams consistent portfolio and vintage reporting.

Industrial and Commercial Bank of China, New York Branch

May 2025 - Jul 2025

Credit Card Operations Analyst Intern | New York, NY

- Reconciled 2,000+ applications with Excel filters to isolate missing or mismatched fields across source documents and internal systems; summarized validation results in Excel charts and maintained 100% processing accuracy.
- Designed a 1,000+ account tracker with account ID, billing cycle, return date, and overdue flags; formulas and conditional formatting prioritized exceptions for follow-up.
- Used PivotTables and Excel visualizations to diagnose cycle bottlenecks and risk-flagging gaps, quantifying a 10% faster issuance turnaround and 15% improvement in early-stage risk identification.

Qulian Technology

May 2024 - Jul 2024

Data Operations Analyst Intern, Energy Data Focus | Hangzhou, China

- Standardized system exports from five energy partners into an Excel review structure keyed by energy type, record date, and consumption amount, covering 100,000+ monthly records.
- Built formula-based completeness and duplicate-key checks; used Data Validation, filters, and conditional formatting to isolate missing values, repeats, format errors, and outliers.
- Compared current and prior-month records to expose cross-period inconsistencies, then traced exceptions by partner, date, and energy type to narrow root causes.
- Coordinated technical, supervisory, and daily-data owners through correction and revalidation, contributing to approximately 5% fewer manual tracking errors.

SELECTED PROJECTS

Global CO2 Emissions & Energy Dashboard 2026

R, Shiny, ggplot2, tidyverse

- Developed a reusable R Shiny module for 50,411 observations, linking year/metric selectors to filtered data, dynamic labels, fitted trends, and correlation summaries.
- Hardened dashboard data quality by excluding aggregate OWID rows, separating missing values from true zeros, documenting 2023-2024 GDP gaps, and packaging the module for app.R integration.
