

JUNYAO (JORDAN) MA

Madison, WI | 608-707-9365 | jordan.analyst.wisc@gmail.com

SUMMARY

Statistics undergraduate with quantitative research, high-volume data validation, and AI product experimentation experience. Applied Python and R to factor construction, standardization, correlation analysis, backtesting, data visualization, and interactive analysis, with additional experience structuring labeled evaluation scenarios for an LLM prototype.

EDUCATION

University of Wisconsin-Madison - B.S. Statistics

Expected May 2027

Probability, Linear Algebra, Regression, Time Series, Statistical Computing, Data Visualization, Machine Learning

TECHNICAL SKILLS

Python (pandas, NumPy); R (tidyverse, ggplot2, Shiny); SQL; regression; time series; factor engineering; z-score standardization; correlation analysis; data cleaning; joins; exploratory visualization; simple backtesting.

EXPERIENCE

Industrial and Commercial Bank of China, New York Branch

May 2025 - Jul 2025

Credit Card Operations Analyst Intern | New York, NY

- Validated 2,000+ credit card application records across source documents and internal systems using structured accuracy, completeness, consistency, and validity checks.
- Investigated missing and inconsistent records, categorized exceptions, documented root causes, and coordinated verified corrections with operations and loan teams.
- Translated stakeholder requirements into validation rules, exception categories, and QA checks, iterating the workflow based on user feedback.

Chuangjin Hexin Fund Management Co., Ltd.

Jun 2026 - Aug 2026

Intern, Quantitative Data Department | Shenzhen, China

- Constructed A-share volume, price, and adjusted-volume factors and standardized cross-sectional values for analysis.
- Tested relationships between factor signals and subsequent excess returns across multiple horizons using correlation-based analysis.
- Ranked securities by signal values and performed simple long-short portfolio backtests to assess robustness.

Alibaba Global Dreamer Program - AI Innovation Track

Jul 2024 - Aug 2024

AI Product Developer | China

- Developed an emotional-support chatbot prototype using Alibaba's Tongyi large language model.
- Collected, categorized, and labeled 500+ emotional-conflict scenarios to support prompt logic, conversation-flow design, and response evaluation.

SELECTED PROJECTS

A-Share Volume Factor Research

2026

Python, pandas, NumPy

- Merged factor observations with 5-day and 20-day excess-return data by stock identifier and evaluated correlation-based information coefficients.
- Compared top- and bottom-quantile returns in a simple long-short backtest and documented limitations for out-of-sample validation.

Global CO2 Emissions & Energy Dashboard

2026

R, Shiny, ggplot2, tidyverse

- Built a reactive analysis module for a 50,411-row dataset with user-controlled metrics, filtering, fitted trend, and correlation summaries.

CREDENTIALS & LEADERSHIP

SOA Exam P - Passed | Chinese National First-Level Golf Athlete | AMC 12 Top 15% and AIME Qualifier
